Projects

○ **Roman numerals convertor**

Converting Roman numbers to base-10 and vice versa

This was my first ever really challenging JavaScript project. I used bootstrap to quickly build a UI so I don't waste too much time on that. I came up with the algorithm by myself which was challenging at the time since it was the first algorithm I was coming up with all by myself. You can check out the code both on [GitHub](#) and [Code Pen](#).

○ **Guess my number**

A little fun mini-game with numbers!

This is one of the mini-projects in Jonas Schmedtmann's "The Complete JavaScript Course", I didn't build the UI, Just the mechanics and game logic. This is also the first project I used git on. Check it out on [GitHub](#) or [Code Pen](#).

○ **Pig Game**

Dice up and have fun!

Another one of Jonas Schmedtmann's "The Complete JavaScript Course" mini-projects, the UI is again not mine, I implemented the game logic and mechanics. I also kept up with program update's with git. Check it out on [GitHub](#) or [Code Pen](#) right now!
